KQ-SOFT Solutions

Pricing & packaging brief for stakeholders

Product: Bank reconciliation and BRS delivery for accounting firms and in-house finance teams (not a full general ledger — works alongside Tally, Sage, and similar)
Market: Ghana (billing in GHS via Paystack)
Document date: October 2026
Status: Pre-production review — verify on http://localhost:9100/#pricing before go-live

---

Executive summary

KQ-SOFT is positioned as **end-to-end bank reconciliation**: upload cash book and bank statement, match with intelligence, approve, and publish a **defensible BRS** (Excel/PDF) with audit trail.

Commercial strategy in one line: Keep **competitive list prices** and a **credible Free tier**, grow revenue through **workspace limits** (projects, transactions, bank accounts, seats, clean exports) and **team/control features**, and **enforce plan limits in the product** so the website, checkout, and day-to-day use stay aligned.

Paid entry point: GHS 199/month (Solo). Checkout is always in **GHS through Paystack**; optional USD/EUR/GBP on the website are **reference only**.

Who each package is for

Package	Typical buyer	Monthly list (GHS)	Headline limits
Free	Trial / very small use	0	1 user · 1 bank · 500 tx/mo · 5 projects/mo
Solo	Individual accountant	**199**	1 user · 3 banks · 3,000 tx/mo · 12 projects/mo
Team	Small finance team	**399**	5 users · 10 banks · 15,000 tx/mo · 40 projects/mo
Firm	Established practice	**990**	10 users · 30 banks · 40,000 tx/mo · 100 projects/mo
Custom	Large firm / enterprise	From **~1,800** (contract)	Unlimited-style quotas · API · onboarding · SLA

Billing periods: Monthly, quarterly (~5% off), or yearly (save up to ~17%).
Self-serve Paystack checkout: Solo, Team, and Firm. **Custom** is sales-led.

What differentiates each tier (features, not just numbers)

Free — “prove it on a real rec”

- Full import path (Excel, CSV, PDF, OCR) and auto-match suggestions
- BRS export with **watermarked / sample** clean downloads
- **Bulk confirm up to 10 pairs** per action
- **Partial** review tools: 5-row discrepancy preview, limited missing-cheques rows, **14-day** activity log

Goal: Let prospects complete a real reconciliation without a card; caps create a natural upgrade when they run multiple clients or need clean client deliverables.

Solo (GHS 199) — “paid professional”

Everything in Free, plus:

- **5 full clean exports/month**, higher project and transaction quotas
- **Split & many-to-many** matching, **roll-forward** across periods
- **AI match ranking** from confirmed history
- **Full** discrepancy and missing-cheques reports
- **Up to 5 bank rules**; bulk confirm **up to 50 pairs**
- Bookkeeping advisory positioning on marketing materials

Goal: Default paid SKU for sole practitioners and side practices.

Team (GHS 399) — “collaborate and brand” *(highlight tier)*

Everything in Solo, plus:

- **5 seats**, more banks and exports
- **Full bank rules engine** (not capped at 5)
- **Audit trail export**, **logo & report branding**
- **Approval threshold warning** before sign-off

Goal: Small teams that need shared work, client-ready reports, and reviewer visibility.

Firm (GHS 990) — “control and throughput”

Everything in Team, plus:

- **10 seats**, higher limits, **60 clean exports/month**
- **Threshold can block reviewer approval** (hard control)
- **Priority support**, bulk confirm **up to 100 pairs**
- Firm dashboard on home

Goal: Practices with formal prep/review/approve and higher volume.

Custom — “platform & contract”

Everything in Firm, plus:

- **Unlimited**-style projects, exports, banks, and seats (contractual)
- **Public REST API** for firm automation
- Personalised onboarding, **4-hour SLA** narrative, custom contract

Goal: Multi-client firms and integrators; not self-serve downgrade/upgrade through Paystack alone.

Pricing philosophy (for board / partners)

1. **Do not strip tier features on downgrade** — use **partial vs full** and **numeric caps** (bulk pairs, audit rows, rules count) so the story stays “we don’t remove capabilities unfairly,” while economics stay protected in code.
2. **Free is marketing + product-led growth**, not a crippled demo.
3. **List prices held** — differentiation is limits and depth, not headline price cuts.
4. **GHS-first** — aligns with Paystack and local buyers; foreign currency on the landing page is indicative only.
5. **Upgrade = immediate value** (more seats, banks, exports, control). **Downgrade = scheduled at period end** so revenue and customer expectations stay fair.

Subscription behaviour (customer-facing promises)

Action	Behaviour

Upgrade	Paystack checkout in GHS; **unused time on current plan can reduce** the upgrade charge (proration credit).
Downgrade	**Scheduled for end of billing period** via Billing — not instant cheap checkout to a lower tier.
After downgrade	Org may exceed new **seat**, **bank account**, or **bank rule** caps; product **enforces** (locked banks, paused rules, seat limit for non-admins). Admins retain access to billing and settings.
API keys	**Custom** tier (firm slug) — API access gated to that plan.

Optional launch promo (if enabled in environment): **50% off first 2 months** on self-serve paid tiers — confirm with operations before advertising.

Competitive messaging (use externally)

- **"Free plan included · Paid plans from GHS 199/mo · No card required"** to start.
- **Pre-built bank layouts** for major Ghana banks plus generic Excel/CSV/PDF.
- **Audit-ready BRS** — branded exports, sign-off states, discrepancy and activity trail on higher tiers.
- **Team** positioned as **most popular** for collaboration and branding.

Pre go-live checklist (internal)

1. Open **http://localhost:9100/#pricing** (or production URL) and confirm table matches this brief.
2. Sign in → **Settings → Billing**: test upgrade copy, proration notice, schedule/cancel downgrade.
3. After deploy, **refresh plan seed / admin plans** so database entitlements match the published plan lineup (stale feature flags must not block Solo+ capabilities).
4. Push latest release to production when satisfied.
