

Mapping & Matching Transactions — User Guide

Product: KQ Bank Reconciliation System (BRS)

Company: KQ SOFT SOLUTIONS

Audience: Preparers, reviewers, and trainers

Updated: June 2026

This guide explains how to **map** uploaded files to the correct columns and **match** cash book lines to bank statement lines. It is the detailed companion to the main [User Manual](#).

Table of contents

1. [Before you start](#)
 2. [Key concepts](#)

 7. [Plan features for mapping & matching](#)
 8. [Troubleshooting](#)
 9. [Quick reference](#)
 10. [Glossary](#)
-

1. Before you start

Mapping and matching happen **after Upload** in every project:

Step	What you do
Upload	Add cash book and bank statement files
Map	Tell the system which column is Date, Amount, Description, etc.
Reconcile	Link cash book rows to bank rows
Review	Check exceptions and variance
Report	Generate the Bank Reconciliation Statement (BRS)

Prepare your files

Good source data makes mapping and matching much easier:

- Use **one reporting period** per project (e.g. January 2026 only).
 - Prefer **Excel (.xlsx)** or **CSV** for highest accuracy. PDF and scanned images are supported but may need more review.
 - Keep **dates** and **amounts** in dedicated columns.
 - Put **cheque numbers** and **references** in their own columns when possible.
 - Avoid duplicate header rows inside the data.
 - For bank statements that contain **both credits and debits in one file**, upload as **Both** on the Upload step — you do not need to split the file manually.
-

2. Key concepts

Cash book vs bank statement

Term	Meaning	Match to
Cash book receipts	Money your business recorded as received	Bank credits
Cash book payments	Money your business recorded as paid (e.g. cheques issued)	Bank debits
Bank credits	Money the bank credited to your account	Cash book receipts
Bank debits	Money the bank debited from your account	Cash book payments

Mapping vs matching

- **Mapping** — One-time column setup. You tell the system: “Column C is Date, Column F is Amount Received.” The system then extracts a table of transactions from each file.
- **Matching** — Ongoing reconciliation work. You link an extracted cash book row to the corresponding bank row (or leave it unmatched as an exception on the BRS).

Document types (logical streams)

Even when you upload one physical file, the system may store it as separate logical documents:

Type	Used for
cash_book_receipts	Receipt / income rows
cash_book_payments	Payment / expense rows
bank_credits	Credits on the bank statement
bank_debits	Debits on the bank statement

If you uploaded a cash book as **Both**, you will see two documents to map — one for receipts (`amt_received`) and one for payments (`amt_paid`). Same idea for bank **Both** → credits and debits documents.

3. Step 2 — Map columns

Open your project → **Map** tab.

What the Map step does

1. Reads your uploaded file (spreadsheet, PDF, or image).
2. Detects column headers (Date, Amount, Credit, Debit, etc.).
3. Suggests how each column maps to standard fields.
4. Extracts transactions you can match in Reconcile.

Required: Every document must have a **date** column mapped. Without a date, matching cannot run reliably.

Fast path — bulk apply

For most monthly reconciliations:

1. Review the **Bulk apply — which files?** panel.
2. Leave all files ticked (new uploads are ticked automatically).
3. Click **Apply suggested mapping to selected**.
4. Check the summary (transaction count, warnings).
5. Click **Proceed to Reconcile**.

The system picks the best Excel worksheet automatically when a workbook has multiple tabs (the sheet with date + amount columns).

Individual mapping (when you need to adjust)

1. Under **Or select a document to map or adjust**, choose a file.
2. Review the **preview table** (first few rows and column indices).
3. For each **canonical field**, pick the matching source column from the dropdown.
4. Read any **Fix required / Check / Tip** messages.
5. Click **Apply mapping**.

Confidence labels (**high**, **medium**, **low**) show how sure the system is about each field mapping.

Fields to map — cash book

Field	Label in app	Required?	Notes
date	Date	Yes	Excel serial dates (e.g. 46023) are converted automatically
amt_received	Amount received	Yes for receipts doc	Map for cash_book_receipts
amt_paid	Amount paid	Yes for payments doc	Map for cash_book_payments
name	Name	Optional	Payer / payee
details	Details	Optional	Particulars / narrative
doc_ref	Doc ref	Optional	Document reference
chq_no	Cheque no.	Optional	Strongly recommended for cheque matching
accode	Account code	Optional	Chart of accounts code

Fields to map — bank statement

Field	Label in app	Required?	Notes
transaction_date	Transaction date	Yes	
credit	Credit	Yes for credits doc	Map for bank_credits
debit	Debit	Yes for debits doc	Map for bank_debits
description	Description	Recommended	Improves match suggestions; cheque numbers can be read from text

Signed amount mode (one amount column)

If your file uses **one column** for both sides (positive = receipt/credit, negative = payment/debit):

- Map the **same column** to both amount fields (e.g. both `amt_received` and `amt_paid`, or both `credit` and `debit`).
- The app shows a **Signed amount mode** notice.
- Positive values → receipts / credits; negative values → payments / debits.

This is common in accounting exports with a single "Amount" column.

Ghana bank auto-detection

For supported banks (Ecobank, GCB, Access, Stanbic, Fidelity, UBA, Absa), the system may:

- Detect the bank format automatically (green badge on preview).
- Suggest normalized column mappings.

Ecobank tip: If you see Payments/Deposits layout, prefer Excel exports. Map **Debit** for the bank debits document and **Credit** for the bank credits document (Payments → Debit, Deposits → Credit after normalization).

After mapping — read the results

Message	Meaning
X transaction(s) extracted	Mapping succeeded
Sign warnings	Some amounts have unexpected signs (e.g. negative in a receipts column) — review preview
Skipped duplicate rows	Identical date + amount + narrative rows were deduplicated
Skipped zero-amount rows	Empty or zero lines ignored
PDF truncation	Only the first N pages were processed — split the PDF or raise the page limit
Some files have no extracted transactions	That document still needs mapping or contains no data

Sign summary buckets:

Bucket	Meaning
Primary	Expected sign for this document type
Cross-ref	Opposite sign (may be valid in signed-amount mode)
Zero	Zero amount
Empty	Missing amount

When mapping is complete for all files, click **Proceed to Reconcile**.

4. Step 3 — Match transactions

Open your project → **Reconcile** tab.

Choose your view

Use the tabs at the top:

View	When to use
Receipts vs Credits	Match money received in cash book to bank credits
Payments vs Debits	Match money paid in cash book to bank debits
Cash book (all)	Overview only — switch to Receipts or Payments to match

If you have multiple bank accounts, use the **bank account** dropdown to filter.

How matching works

Each match links:

- One or more **cash book** transaction(s) on one side, and
- One or more **bank** transaction(s) on the other side.

Match type	Selection	Plan
1-to-1	1 cash book + 1 bank	All plans
1-to-many	1 cash book + 2+ bank	Premium+
Many-to-1	2+ cash book + 1 bank	Premium+
Many-to-many	2+ cash book + 2+ bank	Premium+

A matched row cannot be matched again until you **unmatch** it.

Manual matching (step by step)

1. Switch to **Receipts vs Credits** or **Payments vs Debits**.
2. Click a **cash book** row to select it.
3. Click the corresponding **bank** row.
4. A floating bar appears: **X Book ↔ Y Bank**.
5. Click **Confirm Match**.

Rows with a  icon have suggested matches — hover for details.

Suggested matches

The **Suggested matches** panel lists likely pairs the system found using amount, date, reference, and cheque number.

To use a suggestion:

- **Click** a suggestion to pre-select both rows, then **Confirm Match**, or
- **Tick** suggestions and use bulk actions (Standard plan and above).

Matching Settings (gear icon) control how suggestions are generated:

Preset	Amount	Date	Reference	Cheque no.
Strict	✓	✓	✓	✓
Amount + Date	✓	✓		
Amount only	✓			

- Start with **Strict** for cheques and high-value items.
- Use **Amount + Date** when references differ between cash book and bank.
- Use **Amount only** only as a last resort — review every match carefully.

Settings are saved per project in your browser.

Bulk and auto actions (Standard plan and above)

Button	What it does
Auto-match all (safe → Ecobank)	Applies high-confidence matches in phases (90%+ safe, then Ecobank/receipt 85%+)
Match high confidence (95%+)	Bulk-applies only very confident suggestions

Match selected	Applies ticked suggestions
Match all visible	Applies all suggestions in the list (review carefully)

Bulk match is limited to **50 pairs** per action. Ambiguous pairs (e.g. duplicate cheque numbers) are skipped.

Split suggestions (Premium plan and above)

Split suggestions appear when several cash book lines likely belong to one bank deposit (or vice versa). Click a card to select the whole group, then **Confirm Match**.

Confirmed matches

The **Confirmed matches** panel lists pairs you have already linked. From here you can:

- **Unmatch** — remove a single incorrect pairing
- **Clear all** — remove all matches (use with care)
- **Upload evidence** — attach a supporting file to a match (e.g. remittance advice)

Ecobank Ghana tips

When the Ecobank Ghana BRS profile is active:

- Clearing matches use a wider **date window**.
- Prefer suggestions tagged **Clearing**, **Transfer**, or **Withdrawal** before generic payment↔debit pairs.
- Inward clearing / HSE deposits appear as bank **credits** — look for **Clearing** suggestions.

Best practice for cheques

- Match cheques only when **amount** matches (and **reference/cheque number** when available).
- If you see **duplicate cheque numbers** in the cash book warning, match each row individually — do not bulk-match ambiguous pairs.

When you are done

Click **Proceed to Review** to check unmatched items and variance before generating the report.

Expand **What do these terms mean?** on the Reconcile page for in-app help on unmatched causes.

5. What to leave unmatched

Not every row should be matched in the current period. These are **normal exceptions** on the BRS:

Exception	What it is	What to do
Uncredited lodgments	Receipt in cash book, not yet on bank statement	Leave unmatched — BRS adds it to bank balance
Unpresented cheques	Payment in cash book, cheque not yet presented	Leave unmatched — BRS deducts from bank balance
Bank charges / interest	On bank statement, not in cash book	Enter in cash book and re-map, or note on BRS
Direct credits	On bank statement, not in cash book	Add receipt to cash book, re-upload/map, then match
Timing differences	Same transaction, different dates across period end	Match if visible in this or next statement

6. Bank rules (Standard plan and above)

Settings → **Bank rules** lets admins and reviewers define automatic behaviour:

Setting	Options
Condition	e.g. Description contains SALARY
Action	Suggest match, or Flag for review
Priority	Higher number runs first

Rules influence suggestions during Reconcile — they do not replace your review for high-risk items.

7. Plan features for mapping & matching

Feature	Basic	Standard	Premium	Firm
Column mapping	✓	✓	✓	✓
1-to-1 manual match	✓	✓	✓	✓
Suggested matches		✓	✓	✓
Bulk match		✓	✓	✓
Auto-match (phased)		✓	✓	✓
Bank rules		✓	✓	✓
1-to-many / many-to-many			✓	✓
Split suggestions			✓	✓
Match evidence upload		✓	✓	✓

If a feature is greyed out or shows an upgrade notice, your organisation's plan does not include it.

8. Troubleshooting

Mapping

Problem	Likely cause	Fix
No transactions extracted	Wrong worksheet, wrong amount column, or PDF truncation	Pick correct Excel tab; re-map amount fields; split PDF
"Date column is required"	Date not mapped	Map date or transaction_date
Wrong receipts/payments split	Signed amount or wrong column	Use signed amount mode or map correct amt_received / amt_paid
Ecobank debits/credits swapped	Payments/Deposits layout	Map Debit on debits doc, Credit on credits doc
Mapped MONTH instead of DATE	Wrong column selected	Map the DATE column (often Excel serial numbers)

Far fewer rows than expected	Duplicates skipped, zero amounts, footer rows	Check import stats in mapping summary
------------------------------	---	---------------------------------------

Matching

Problem	Likely cause	Fix
No suggestions	Standard plan required; or settings too strict	Upgrade plan or relax Matching Settings
Too many wrong suggestions	Amount-only mode too broad	Use Strict or Amount + Date
Cannot match in Cash book (all) view	Matching disabled in overview	Switch to Receipts or Payments view
"Already matched" error	Row linked in another pair	Unmatch first, or pick a different row
Cheque won't match	Different amount or reference on bank	Verify mapping; check bank description for truncated cheque no.
Duplicate cheque warning	Same chq no. on multiple rows	Match individually, not bulk

Data quality

Problem	Fix
Amounts don't match	Re-check mapping; verify currency and decimal format
Dates off by one day	Normal near month-end — use Amount + Date mode
Missing bank lines	Confirm full statement uploaded and PDF not truncated

9. Quick reference

Map — minimum required fields

Cash book receipts: date + amt_received

Cash book payments: date + amt_paid

Bank credits: transaction_date + credit

Bank debits: transaction_date + debit

Reconcile — typical monthly workflow

1. **Receipts vs Credits** → match or leave lodgments unmatched
2. **Payments vs Debits** → match or leave unpresented cheques unmatched
3. Review **Suggested matches** with **Strict** settings first
4. Use **Auto-match all** for remaining safe pairs (Standard+)
5. Manually match exceptions
6. **Proceed to Review**

Keyboard / selection tips

- Click rows to toggle selection
- Use **Clear** on the floating bar to deselect
- Filter by bank account when reconciling multiple accounts

10. Glossary

Term	Definition
Mapping	Assigning source file columns to system fields (Date, Amount, etc.)
Matching	Linking a cash book transaction to a bank transaction
Canonical fields	Standard field names the system uses internally
Uncredited lodgment	Receipt recorded in cash book, not yet on bank statement
Unpresented cheque	Payment recorded in cash book, cheque not yet debited by bank
Signed amount mode	One column holds both positive and negative amounts
Confidence	How likely a suggested match is correct (0–100%)
BRS	Bank Reconciliation Statement — final report

Training checklist (for team leads)

Use this when onboarding preparers:

- ☐ Upload sample cash book as **Both** and bank statement as **Both**
- ☐ Complete **bulk apply** mapping on first run
- ☐ Re-map one document individually and read mapping issues
- ☐ Match 5 receipt↔credit pairs manually
- ☐ Match 5 payment↔debit pairs manually
- ☐ Try **Strict** vs **Amount + Date** matching settings
- ☐ Leave one lodgment and one unpresented cheque unmatched
- ☐ Unmatch and re-match one pair
- ☐ Proceed to Review and confirm exceptions appear correctly

For the full platform guide (upload, review, report, settings, billing), see the [User Manual](#) in the app under **User Manual** in the navigation menu.
