

Ghana BRS — Match by Counting: Training Guide

How to use your counting method inside Reconcile · with worked examples

Hello Sir,

This guide trains you to use **Match by counting** in the live Ghana BRS product. It follows the method you described (count amounts by side, then filter into only-CB, only-bank, open imbalances, and a separate batch-cancel schedule). Counting **guides** the work; **Confirm Match** still clears lines for the official BRS.

Training tip: Keep this PDF beside the screen. Open any project → **Reconcile** → panel **Match by counting**. Practise on Unmatched scope first.

1. The idea in one picture

For each amount, the system counts how many times it appears in the cash book (receipts or payments) and how many times on the bank (credits/odgments or debits). The difference tells you which list it belongs to.

Figure 1 — Count cash book vs bank by amount, then classify into four outcomes.

2. Where to click (5 steps)

- **Open** your project and go to the **Reconcile** step.
- Find the panel **Match by counting** (above Suggested matches). Expand it if collapsed.
- Leave scope on **Unmatched** (recommended). Use **All lines** only if you want the full extract counted.
- Click a list button (Only CB, Only bank, Open..., or Cancel...). Read the table: Amount, CB count, Bank count, Diff.
- Use **Select lines** or **Suggested matches**, then **Confirm Match**. Counts refresh as unmatched shrinks. Export **Excel** or **PDF** for working papers.

Counting guides — matching clears

Figure 2 — Recommended training path on Reconcile.

3. What the panel looks like

You should see summary pills (Only CB / Only bank / Open / Batch cancel), list filters, and a table with **Select lines**. Export buttons sit at the top-right of the panel.

Figure 3 — Match by counting panel (training illustration of the live Reconcile UI).

4. Worked examples (same logic as your notes)

Use these four examples when you train yourself or a junior. Each maps to one of your filter categories.

Case	Numbers	List in the product	What you do next
A — Only CB	CB receipts: 1,200 × 1 Bank credits: none	Only CB — Received	Leave for BRS (uncredited) or find the bank credit later and match.
B — Only bank	CB payments: none Bank debits: 400 × 1	Only bank — Debits	Often a bank charge — post to cash book or leave as BRS deduction item.
C — Open	CB receipts: 5,000 × 2 Bank credits: 5,000 × 1 Diff = +1	Open — more receipts in CB	Do not assume both cleared. Select lines / suggested match; confirm one pair; recount.
D — Cancel schedule	CB payments: 800 × 3 Bank debits: 800 × 3 Counts equal	Cancel — payments = debits (separate from main BRS)	Still confirm real matches (cheque/payee/date). Equal counts ≠ automatic clear.

Example A — Only in cash book

Receipt of **GHS 1,200** appears once in the cash book and nowhere on bank credits. It lands in **Only CB — Received**. That is a classic uncredited lodgment candidate for the BRS detail list.

Figure 4 — Example A: only cash book.

Example B — Only on bank

Bank debit **GHS 400** with no matching payment count in the cash book. It lands in **Only bank — Debits** (e.g. bank charges). Investigate or leave as a BRS outstanding bank item.

Figure 5 — Example B: only bank.

Example C — Open imbalance (more on cash book)

Cash book has **two** receipts of GHS 5,000; bank has **one** credit of GHS 5,000. Difference +1 → **Open — more receipts in CB**. This is why amount-only auto-clear is unsafe: one of the two 5,000s may be a different economic event. Use Suggested matches or Select lines, confirm carefully, then recount.

Figure 6 — Example C: open imbalance.

Example D — Batch cancel (separate schedule)

Three payments of GHS 800 and three bank debits of GHS 800 → counts cancel. They appear on the **separate cancel schedule** (not the main BRS detail list), exactly as in your note. Still confirm matches using cheque/reference/date where available before treating them as cleared in the system.

Both sides, batch cancels → separate report	Cancel — receipts = credits · Cancel — payments = debits (+ Excel/PDF sheets)
---	---

6. Rules to remember while training

- Counting uses **amount frequency** only — that is intentional for these lists.
- Clears use **Confirm Match** (suggested or manual) with date / cheque / reference / narration as needed.
- **Select lines** is capped at 50 per side — match large piles in batches.
- Official printed BRS still comes from unmatched after confirmed clears; use Excel/PDF count schedules as working papers.
- If cash-book sides look inverted, the system may apply crossed pairing automatically — a banner will say so.

Practise once on a known specimen (cash book + bank for the same period). Walk Examples A–D in the panel, export PDF once, then confirm one real match and watch the Unmatched counts update.

Kind regards,

KQ Soft Solutions — Ghana BRS Product Team
