

Ghana BRS — Match by Counting: What We Built

Breakdown for your review and confirmation · Aligns your counting method with the live SaaS product

Hello Sir,

Following your agreement with our earlier advice, and your updated note on **match by counting**, we have now implemented the solid parts of your method inside the Ghana BRS product. This document explains **exactly what you will see**, how it maps to your process, and what we need you to confirm is acceptable.

Please review this breakdown. If you are satisfied, reply that you are okay with this design so we treat counting as closed for go-live. If anything is missing from your lists/schedules, tell us which list — we will not reopen the clear-engine debate.

1. What we agreed (locked)

You confirmed you were fully in agreement with this model:

- **Counting guides and reports** — your amount-frequency lists and schedules.
- **Corroborated matching clears** — amount plus date / cheque / reference / narration (and bank patterns). The system does **not** auto-clear from amount count alone.
- This is required for a multi-user SaaS BRS (audit, many banks, many staff) — not only a personal workbook.

2. Where you find it in the product

Open a project → go to the **Reconcile** step. You will see a panel titled **Match by counting** (above Suggested matches). It is part of the BRS reconcile workflow — **not** a separate Tools module like file cleanup.

Control	What it does
Unmatched / All lines	Default = unmatched only (what still matters for BRS). Toggle All lines to count the full extract.
BRS detail list buttons	Only CB Received/Payment; Only bank Lodgment/Debits; Open more/less imbalances.
Separate cancel schedule	Receipts count = credits count; Payments count = debits count — separate from main BRS, as you specified.
Excel / PDF	Download all schedules for review or working papers.
Select lines	Pre-selects those cash-book/bank lines so you can Confirm Match (capped at 50 per side). Counts never clear by themselves.

3. Mapping your method → what we built

Your process (A/B/C) is implemented as follows:

Your ask	In the product	Status
Count each amount in CB (receipts/payments separately)	Per-amount CB count vs bank count, by side	Built
Count same amount on bank; take the difference	Difference column (CB – Bank)	Built
Amounts only in cash book → Received / Payment lists	Only CB — Received / Only CB — Payment	Built
Amounts only in bank → Lodgment / Debits lists	Only bank — Lodgment / Only bank — Debits	Built

Both sides, batch totals do NOT cancel → BRS details (more/less)	Four open imbalance lanes (more receipts/credits/payments/debits) — same information as your eight more/less labels without duplicate mirrors	Built
Both sides, batch totals cancel → separate report	Cancel — receipts = credits / payments = debits (+ Excel/PDF sheets)	Built
Use amount only as the statistic for these lists	Yes — counting uses amount frequency only	Built
Amount only as the rule that auto-clears matches	Not used for clears (per our agreed SaaS model)	By design

4. How this works with matching (important)

Two layers, one reconcile screen:

Layer	Role
Match by counting	Shows imbalances and your schedules. Guides the eye. Export working papers.
Suggested / manual Match	Decides what is actually cleared (with date/chq/ref/narration). Feeds the official BRS outstanding items.

Recommended use: open **Match by counting** → inspect open imbalances → **Select lines** or use Suggested matches → **Confirm Match** → recount updates as unmatched shrinks → print official BRS from Report as usual.

5. What we deliberately did not build (and why)

- **Standalone “count tool” like file cleanup** — counting stays inside the project Reconcile step so it supports full BRS, not a free-standing utility.
- **Main printed BRS rewritten from count lists alone** — the official BRS still comes from unmatched items after confirmed matches (defensible). Your count schedules are available as Excel/PDF working papers alongside.
- **Auto-clear when batch counts cancel** — same amount can belong to different payees/cheques; SaaS must not silently clear those.

6. Please confirm you are okay

Kindly reply with your confirmation on the following (Yes / No or short note):

1. The **Match by counting** panel on Reconcile covers your list structure (only CB, only bank, open more/less, separate cancel schedule).

■ Yes, okay ■ Needs change: _____

2. Excel/PDF export of those schedules is enough for your working papers / separate cancel report.

■ Yes, okay ■ Needs change: _____

3. You accept that **clears** still go through suggested/manual Match (not amount-count auto-clear).

■ Yes, okay ■ Needs change: _____

4. You accept that the **official printed BRS** remains based on confirmed unmatched items, with counting as the diagnostic/schedule layer.

■ Yes, okay ■ Needs change: _____

5. You are okay that this is **not** a separate Tools module like file cleanup.

■ Yes, okay ■ Needs change: _____

If all items are Yes, we will treat match-by-counting as **closed** for this release and continue using the product as described above.

Kind regards,

KQ Soft Solutions — Ghana BRS Product Team
